

Inspire Small/Mid Cap Impact Equal Weight Index tracks the stock performance of 500 inspiring small and mid cap companies in the U.S., as determined by Inspire’s revolutionary Inspire Impact Score methodology which measures a company’s positive impact on the world. Under normal circumstances the index will be comprised of 50% U.S. mid cap companies with market cap between \$2B-3.5B, and 50% U.S. small companies with market cap between \$1B-2B. Inspire believes that companies in this “smidcap” capitalization range have the potential to deliver above average growth. The index is equally weighted, rebalanced quarterly and calculated on a gross total return basis in USD.

INSPIRING COMPANY HIGHLIGHT

NEXTERA ENERGY, INC (TICKER: NEP)

NextEra Energy is the worlds largest producer of wind and solar energy. NextEra provides energy-related products and services to build energy infrastructure that drives economic growth and supports communities. To NextEra Energy, being a sustainable company means respecting the environment, delivering outstanding customer value, supporting communities, and empowering their team and growing shareholder value. As an investor in ISMD, you are supporting and sharing in the revenues of this inspiring company working to provide much needed clean and efficient energy across the globe. That is what we call inspiring transformation!

*Inspire Impact Score provided by inspireinsight.com as of 3/31/2020

Past performance is no guarantee of future results. Investors cannot invest directly in an index and unmanaged index returns do not reflect any fees, expenses or sales charges. This Inspire Index is not meant to represent any Inspire ETFs. All returns of one year or greater are annualized.

Annualized performance is the return an investment provides over a period of time, expressed as a time-weighted annual percentage for periods shorter and longer than 1 year. Annualized Volatility is a statistical measure of the dispersion of returns for a given security measured by using the standard deviation between the daily returns from that same security and expressed as an annual average. Commonly, the higher the volatility, the riskier the security. The Sharpe ratio is the average annual return earned in excess of the risk-free rate (i.e. 1 year LIBOR) per unit of volatility as measured by the annualized standard deviation. Maximum drawdown (MDD) is the maximum loss from a peak to a trough of a portfolio, before a new peak is attained.
